## TASKS\_LIST

- The page doesn't have enough keywords.
- The page title is too short.
- Meta description is missing!
- Text/Code ratio is too low.
- The URL doesn't redirect with or without www.
- Server Technology is visible.
- H1 Title is missing or empty.
- There are too many H2 titles in the page.
- H3 Title is missing.
- Hx titles are not optimized.
- You should add alternative description to your images.
- DNSSEC is not enabled.
- Reverse(s) DNS exists.
- Microdata is not used.
- Open Graph is not used.
- The twitter card is not defined.
- There are too many scripts in the page, you should use external files.
- Sitemap is not defined in the Robots.txt file.
- Server does not use file compression.
- There are HTML code in HTML comments.
- HTTPS is not enabled
- Execution time exceeds 0.5 seconds.
- NoScript tag is missing.
- Website is not ipv6 ready.
- The page is not linked to Google Plus.
- X-Xss-Protection header is missing.
- Content-Security-Policy is missing.

### INDEXATION OVERVIEW

École nationale de la magistrature |  
<http://www.enm.justice.fr/>

École nationale de la magistrature |  
<http://www.enm.justice.fr/>

### LINK JUICE OVERVIEW

## HEADER INFORMATION

### PAGE TITLE

The page title is too short.

36 characters

École nationale de la magistrature |

*Between 55 and 65 characters (spaces included) are advised. The title of the page should contain the main keywords and the name of your company/brand. Don't just write a list of keywords, but human-readable sentences describing the page content. Each title should be unique and specific. Avoid stopwords as much as possible (my, the, a, etc.). If the title is longer than 65 characters, it won't be entirely displayed on Search Engine Result Pages. The title tag must appear at the top of the head tag, just after the meta charset tag.*

### META DESCRIPTION

Meta description is missing!

0 characters.

(Missing)

*Between 55 and 300 characters (spaces included) are advised. The meta description tag is read by search engines and is displayed in SERPs. This tag describes the page content without being a straight forward list of keywords and must contain the most important keywords of the page. Ensure that each of your web pages has a unique meta description. The meta description tag should appear after the title tag inside the head tag.*

### META ATTRIBUTES

TYPE	META	CONTENT
charset		utf-8
name	generator	Drupal 7 ( <a href="https://www.drupal.org">https://www.drupal.org</a> )
name	twitter:card	summary
name	twitter:url	<a href="http://www.enm.justice.fr/">http://www.enm.justice.fr/</a>
name	twitter:title	École nationale de la magistrature
name	viewport	width=device-width, initial-scale=1.0, maximum-scale=1.0, user-scalable=no
property	og:site_name	École nationale de la magistrature
property	og:type	website
property	og:url	<a href="http://www.enm.justice.fr/">http://www.enm.justice.fr/</a>
property	og:title	École nationale de la magistrature

*Meta tags are used to place metadata in a HTML page. They provide search engine with a certain quantity of information facilitating the analyze and the indexation of your website in search engines, index and social networks.*

*Meta Tags should be placed after title and the metaDescription after your HTML code.*

## INDEXATION

## META ROBOTS

The Meta Robots tag enables the indexation by search engines.

(Missing)

*The meta robots tag states when search engines should explore, index or follow your page. This tag can be responsible for the absence of your website in search engines index.*

*The "noindex" value prevents the page from being indexed and the "nofollow" value prevents the links from being tracked by search engines robots.*

*The tag should be placed after the title tag and the meta description in the head tag of your HTML document.*

## ROBOTS.TXT

A robots.txt file has been found.

```
#  
# robots.txt  
#  
# This file is to prevent the crawling and indexing of certain parts  
# of your site by web crawlers and spiders run by sites like Yahoo!  
# and Google. By telling these "robots" where not to go on your site,  
# you save bandwidth and server resources.  
#  
# This file will be ignored unless it is at the root of your host:  
# Used: http://example.com/robots.txt  
# Ignored: http://example.com/site/robots.txt  
#  
# For more information about the robots.txt standard, see:  
# http://www.robotstxt.org/robotstxt.html

*The meta robots tag states when search engines should explore, index or follow your page. This tag can be responsible for the absence of your website in search engines index.*

*The "noindex" value prevents the page from being indexed and the "nofollow" value prevents the links from being tracked by search engines robots.*

*The tag should be placed after the title tag and the meta description in the head tag of your HTML document.*

## SITEMAP

**Sitemap is not defined in the Robots.txt file.**

**0 sitemap(s) have been defined..**

*Sitemaps are files providing search engines with an ordered organization of the linking structure of your website. These files help you to define the importance you attach to each page, their update frequency and their URL. More importantly, it is the list of all the available pages on your website that search engines should crawl.*

*Written in XML file, a sitemap must not contain more than 50 000 URLs.*

## DUPLICATE CONTENT

### WWW REDIRECTION 301

*To redirect your web pages to http://www or http:// (with or without www) to avoid duplicate content is essential. Your website has to be reachable through a single address.*

*The redirection should be a 301 redirection (the page is moved permanently to another location) rather than a 302 redirection (the page is moved temporary to another location).*

### LINK CANONICAL

Canonical Url is defined.

http://www.enm.justice.fr/

*The attribute link rel="canonical" enables you to avoid duplicate content. A canonical URL corresponds to the favorite version of a set of pages with a similar content (example: a product sheet found in two different categories and thus in two different links).*

*Determine the URL you would like to present to users and indicate it in your tag.*

## MULTIMEDIA

### ALTERNATIVE TEXT

You should add alternative description to your images.

1/7 images have an optimized alternative text.

SRC	ALT
http://www.enm.justice.fr/sites/all/themes/theme822/logo.png	Accueil
http://www.enm.justice.fr/sites/default/files/Concours.jpg	
http://www.enm.justice.fr/sites/default/files/catalogue_FC.jpg	
http://www.enm.justice.fr/sites/default/files/styles/portfolio_3_cols/public/field/image/juger-creer-cour-penale-internationale-2018.jpg?itok=XrD9Grhr	
http://www.enm.justice.fr/sites/default/files/styles/portfolio_3_cols/public/field/image/violence-femme-2018.jpg?itok=KPmBe-6c	
http://www.enm.justice.fr/sites/default/files/styles/portfolio_3_cols/public/field/image/koweit-ccoperation-2018.jpg?itok=u-jTOx1B	
./sites/default/files/logo-MJ-34px.jpg	

*The alt attribute gives information to search engines about the description of your image (an alternative text).*

*The alt attribute must be defined, so that robots get information about the description of the image in order to index it in image search engines.*

*It can be helpful for impaired people and will be displayed in case of problem with image loading.*

*Place your keywords wisely because this tag is another key to boost your SEO. The length of the textual alternative must be less than 80 characters.*

# NETWORKING

## NUMBER OF LINKS

**There is an optimum number of link tags.**

**There are 63 links in your page.**

```

*Too many links in a page decrease the importance of each of them.*

*The excessive use of links can be similar to spam indexing for search engines and you would lose efficiency.*

*More than 100 links must be avoided. If you can't avoid it, spread your links over several pages.*

## LINK JUICE

**There are more internal links than external links.**

**11.1% of your links are external links, in this case 7/63 links.**

*The link juice is related to the ratio between internal links and external links. It is used to detect if the site is a gateway aiming at redirecting the user towards another website.*

*This ratio must be lower than 50%. The more links you add to a page, the less link juice each link will receive.*

## THERE ARE NO LINKS WITH underscores.

**There are no links with underscore.**

**100% of your internal links do not contain underscores (\_), in this case 56/56 links..**

*The use of underscores "\_" in a link is not recommended. They are not recognized by search engines as keyword separators.*

*In order to structure your URL, you should replace them by hyphens "-". Search engines would be able to distinguish each keyword thanks to the hyphen.*

*For example: <http://www.mywebsite.com/shoes-summer> will be associated to the keywords : shoes and summer while [http://www.mywebsite.com/shoes\\_summer](http://www.mywebsite.com/shoes_summer) will be associated to the single keyword summershoes.*

## FOLLOW LINKS

**There are not too many links in the page.**

**100% of your links are followed by search engines, in this case 63/63 links.**

*Links involving the rel="nofollow" attribute are not tracked by search engines. In other words, the search engine will not visit the page targeted by this link.*

*Each link, whether it is follow or nofollow, impact the spread of the link juice of the page. Therefore, if your page contains too many nofollow links, the link juice assigned to the follow link of your page will be decreased.*

*Thus nofollow links must be used only for pages that don't need to be indexed.*

## RELIABLE LINKS

Links are reliable.

100 % are reliable links, in this case 63/63 links.

*A valid link is a link that can be properly read by a search engine. Javascript links are not valid.*

*A Valid link is a link with a href attribute pointing towards a page, a URL or an anchor.*

*The Javascript links must be avoided and be replaced by scripts.*

## PERFORMANCE

### PERFORMANCE OVERVIEW

 FILE SIZE  
**45.49 kb**

 COMPRESSION RATE  
**0%**

 EXECUTION TIME  
**1 s**

### PERFORMANCE SCORE

## DOWNLOAD OPTIMIZATION

### PAGE WEIGHT

The page weight is good.

45.49 kb to download to get your HTML page.

*The webpage loading speed and the page display are criteria taken into account by search engines in the SEO. Users flee slow loadings.*

*Your webpages should not go over 50ko (without considering images and other media. This only concerns the weight of the HTML page).*

### EXECUTION TIME

Execution time exceeds 0.5 seconds.

1 s

*The execution time is the time your server needs to generate the webpage. The time is not related to the internet connection but depends on the server configuration and the associated code. Optimize your server configuration as well as your code to reduce this time.*

### COMPRESSION

Server does not use file compression.

compression is not configured.

*Compressing your webpages enables you to optimize their loading time by decreasing the amount of data to be downloaded. This feature must be activated on the web server (gzip). The server compresses the page while sending to the customer, then the browser decompresses the page in order to display it.*

## LOADING OPTIMIZATION

### SCRIPTS LOCATION

There are no scripts in the header.

0 scripts are not in the footer

*Your scripts should be located at the end of your document (just before the body end tag), so that the page render starts before the scripts interpretation. Setting scripts at the end of your document improves the loading time of the page in the browser.*

### INTEGRATED SCRIPTS

There are too many scripts in the page, you should use external files.

12.46 kb scripts are directly integrated in the page

*It is better to include Javascript in a separate file to optimize the loading time of the page. Besides, if scripts are common to several webpages, they will be downloading only one time.*

## INLINE CSS

There is no inline CSS in the page.

*The inline CSS are styles contained in the style attribute =": This technique is not recommended because it weighs down your page and slows down the page render. Rather use CSS classes that enables the reuse of styles.*

## STYLE TAGS

There is no style tag in the page.

0 b of CSS styles integrated on your page

*Avoid integrating your styles directly into the HTML file (style), it considerably increases the weight of the page and doesn't enable the share of these styles in all pages. The use of a style attribute is tolerated for only few lines (tolerated up to 2ko).*

# DESIGN

## DESIGN OVERVIEW

DOCTYPE  
**HTML5**

CHARSET  
**utf-8**

SSL  
**Disabled**

SERVER IP  
**193.239.121.41**

DESIGN QUALITY  
**Correct**

SECURITY  
**Low**

## STANDARDIZATION

### DOCTYPE

The website doctype is HTML5.

HTML5

*A doctype is a compulsory directive at the beginning of SGML and XML documents specifying rules of its syntax.*

*Without doctype, the reading of the document is not optimized, which can lead to unwanted behaviors. A doctype includes the name of the Document type Definition (DTD) that defined the syntax rules used in your page.*

### CHARSET

Charset is valid.

Header : utf-8

Meta : utf-8

*It is important to define the set of characters used in order to minimize display problems in your texts.*

*The set of characters Unicode with the UTF-8 encoding is advised and enables you to manage all the languages and it is supported by all web browsers.*

## LAYOUT QUALITY

### TABLE DESIGN

Page does not use design with tables.

*Tables have a semantic meaning. They are used to present data, values and other sequential information.*

*This obsolete layout technique weighs down the code and slows down the rendering. It highlights a limited optimized design needing an updating.*

*A "div" structure is recommended for your web design instead of a table.*

### COMMENTED HTML CODE

There are HTML code in HTML comments.

1.32 kb of HTML code commented

*HTML code commented is useless because it weighs down your web page and lengthens the loading time. It describes an unfinished integration you should remove it from the page.*

## FRAMES AND IFRAMES

No frame or iframe have been found in the page.

*HTML Frame tags enable the display of several HTML pages in the same browser window.*

*Frames are not advised because their content is unreadable by search engines and can create problems of accessibility.*

## FLASH

No flash content has been found in the page.

*Flash animations have become obsolete and have been replaced by CSS3 and HTML5 animations.*

*Flash animations are no longer taken into account by mobile devices and flash contents websites are not indexed by search engines.*

# SERVER CONFIGURATION

## ENVIRONMENT

Server Technology is visible.

**Server** : Microsoft-IIS/8.5

**Technology** : PHP/5.6.31 ASP.NET

*It is highly recommended to hide information related to technologies installed on your web server to ensure protection against the risk of hacking. Avoid disclosing too much information because it reveals known security breaches of the displayed version.*

## IPV6 COMPATIBILITY

Website is not ipv6 ready.

**IPv4** : 193.239.121.41 - Reverse : psk1041.oxyd.net

*The IPv6 protocol is a new version of the IP protocol which is the main protocol of routing packets used on the Internet. The IPv6 protocol will soon replace the IPv4 protocol. Your web server must be prepared for this change.*

## DNS

DNSSEC is not enabled.

Reverse(s) DNS exists.

host : enm.justice.fr  
class : IN  
ttl : 3599  
type : A  
ip : 193.239.121.41

*A DNS server is used to obtain the IP address corresponding to a domain name. DNSSEC enables to secure the authenticity of the DNS response in order to avoid Cache Poisoning attempts.*

# SECURITY

## SCANNABLE EMAIL ADDRESS

No email address has been found in the page.

*You should replace email addresses by images or javascripts.*

*These email addresses can be automatically detected by robots in order to spam you.*

## X-XSS-PROTECTION

X-Xss-Protection header is missing.

(Missing)

*Recent browsers (Internet Explorer, Google Chrome et Safari) have integrated filters in order to detect possible attacks. However, this feature can be disabled.*

*Add the "X-XSS-Protection" in the HTTP header with "1; mode=block" as value (1 to indicate the activation, and mode=block to indicate that the entire page must be blocked if a problem occurs). It will force the execution of these filters.*

## CONTENT SECURITY HEADER

Content-Security-Policy is missing.

(Missing)

*Implementing a content security policy explains to the web browser which servers are allowed to deliver resources on the page. If the browser makes a request to an unauthorized server, the user will be warned.*

## HTTPS

HTTPS is not enabled

*Https (HyperText Transfer Protocol Secure) is a secure communication protocol (SSL). It numbers communications between visitor and websites.*

*Https is generally used for online financial transactions or for the consultation of private data, but also for websites that do not collect sensitive customer information. Search engines consider that moving on to https guarantees your credibility.*

## CONTENT

### CONTENT OVERVIEW

### CONTENT METRICS

#### RATIO TEXT/CODE

4.96 of text in the page

#### QUANTITY OF KEYWORDS

219 keywords

#### KEYWORD REPETITION

153 219 keywords

## CONTENT PERFORMANCE

### RATIO TEXT/CODE

**Text/Code ratio is too low.**

**4.96 % of your page content is text type.**

*The text/code ratio corresponds to the quantity of text compared to the quantity of HTML code in the page. It is used to estimate the richness of the page content.*

*The higher the ratio is, the higher the credibility of the page is. A 15%-ratio minimum is recommended.*

*Improving your text/code ratio will decrease the loading time of your page.*

*Don't forget to ease your code by cancelling comments or useless code.(div succession, line break, white spaces...).*

## SEMANTIC

### TITLES

**H1 Title is missing or empty.**

**There are too many H2 titles in the page.**

**H3 Title is missing.**

**Hx titles are not optimized.**

H1	H2	H3	H4	H5	H6
0	8	0	0	0	0

#### TYPE CONTENT

h2	Formulaire de recherche
h2	Recherche & Documentation
h2	Derniers arrêtés
h2	Marchés publics
h2	Kiosque
h2	Infos concours et scolarité
h2	Offres d'emploi
h2	Logements

*H1 to h6 titles are used to organize the structure of the page content in relation to their importance.*

*Each HTML document can contain a main title (h1) and less important subtitles (h2, h3) and so on (h4, h5 and h6)... Ensure that the logical order is respected. as these are essential for an efficient SEO strategy. Use these tags to integrate your strategic keywords.*

### MICRODATA

**Microdata is not used.**

*Microdata appeared with HTML5 to offer semantic content in HTML documents. This data is then used by search engines in their results pages.*

*For example, they are used to identify on a page featuring blogs reviews, comments, videos...*

**KEYWORDS**      **Keywords used in Page Title appear in most used keywords in body.**

**3 of 3 title keywords appear in main keywords of your page**

*The title tag must contain the main keywords used in the redaction of your page. The theme of the page in question must be clearly described.*

*If not, either your title is not representative of your page or keywords of your page are not properly optimized.*

*Avoid default titles such as "no title", "new document", "homepage"... As well as generic titles that don't showcase your keywords such as "Welcome to my website!"*

**KEYWORDS DENSITY**

**The page doesn't have enough keywords.**

**219 exploitable keywords and 219 single keywords.**

## Expressions of 1 keyword

N	KEYWORD	OCCURRENCES	DENSITY	DENSITY WEIGHTED

*The keyword density refers to the number of times a same word appears on a web page. The keyword density value takes into account the context and semantics related to keywords (text in bold, h1, links...).*

*Ensure that you do not over-optimize your keywords and to not repeat them too many times. High quality texts are better: Think visitors and not only search engines.*

# ACCESSIBILITY

## ACCESSIBILITY OVERVIEW

IPHONE 7

IPHONE 7 PLUS

## ACCESSIBILITY

### URL REWRITING

URLs are clean.

*URL rewriting enables you to insert your keywords by renaming dynamically your URLs. It enables to create an easily readable URL by replacing the variable of dynamic websites by easier addresses. It will also ease your website crawl by search engines that will identify the topic of the page.*

*For example, it enables to rewrite an URL such as <http://www.car.com/page.php?id=2&category=3> in a readable URL such as <http://www.car.com/convertible-gasoline-2009>.*

### DOMAIN LENGTH

The domain name length is good.

enm.justice.fr

14 characters.

*Short and easy to understand URLs to transmit your information are the key of a good user experience. A long domain name has less chance to be memorized by the user.*

## USABILITY

### NOSCRIPT TAG

NoScript tag is missing.

*The noscript tag is used to display a message when the Javascript is not activated in the browser of the user, warning him or her about an altered or impossible use of the website.*

*This tag can be used in the head tag and in the body tag.*

### BGSOUND

There is no Bgsound tag in the page.

*The bgsound HTML tag (background sound) is a feature defined by Internet explorer to connect a background sound to a page. This feature is obsolete: use the audio tag to share audio content rather than bgsound tag.*

### INPUT LABEL

Each form input has a valid label defined.

INPUT ID

edit-search-block-form--2

INPUT LABEL

Rechercher

*The bgsound HTML tag (background sound) is a feature defined by Internet explorer to connect a background sound to a page. This feature is obsolete: use the audio tag to share audio content rather than bgsound tag.*

## FAVICON

A shortcut icon has been defined.

*A favicon is a file containing one icon associated with a particular website on a browser. The icon can appear in the browser's address bar in the history and next to the page's name in the list of bookmarks. The use of a favicon has several advantages for the website: it builds the brand image, gives credibility and allows to be better recognized and found by the user. Choose the simplest and most readable illustration (avoid animations). Your image must be easy to identify by being displayed in a small size.*

## INTERNATIONALIZATION

### LANGUAGE

Content language is defined.

Lang attribute of the HTML document : fr  
Lang attribute of the HTTP header : fr

*The language has to be defined in your page.*

*The defined language has to be the same as the language used on your webpages as well as the same geographical area targeting by the domain name.*

*If your website is multilingual, use a different URL for each translation and make sure that the language of each webpage is specified in your HTML code.*

## SHARING

### OPEN GRAPH

Open Graph is not used.

École nationale de la magistrature

WWW.ENM.JUSTICE.FR

*The open graph Protocole (OGP: Open Graph Protocol) is a protocol created by Facebook enabling you to define the content of a Facebook page.*

*Fill as many open graph tags as you can and define a visual corresponding to the page content rather than a simple logo.*

### TWITTER CARD

The twitter card is not defined.

*Twitter cards are miniatures generated during the share of a link towards your website. They enable to enrich your tweet with metadata like Facebook, Opengraph and Google+ Publisher.*

*Define a title and a description matching with your page content. Add a visual to your Twitter cards: most illustrated tweets are 150% more retweeted than tweets without pictures.*

## MOBILE COMPATIBILITY

### RESPONSIVE

Meta Viewport has been found in the page.

*The meta viewport tag defines the surface of your browser window. This tag indicates devices the size of the page to display. It enables you to adapt your page to different screen sizes. It is characterized by Responsive Designs.*

*The website has to be Responsive to be indexed in Search Engines.*
